Ask your Doctor about **Medex Test™**

The leading product in early diagnostic screening for the detection of internal organ disorders (including cancers).

Medex Test is:

- ◆ Painless & non-invasive
- ◆ Highly Accurate
- ◆ Radiation-Free & Safe
- ◆ Instant & Convenient

A NEW ERA IN DISEASE DETECTION

What is the Medex Test?

Medex Test™ is an innovative and powerful early diagnostic screening system for medical practitioners providing highly accurate and advanced computerized screening for internal organ pathologies. It can help to detect numerous organ-related diseases, including cancers.

Due to the complexity of the body's internal systems, accurately diagnosing organ disorders is extremely difficult.

Unfortunately, doctors' initial diagnoses are sometimes incorrect, and patients are often subjected to unnecessary tests in search of the correct diagnoses. These tests can be very painful and expensive with minimal yield.

The Medex Test™ system combines the principles of pathophysiology and neuroreflexology to help in the early diagnosis of diseases involving the:

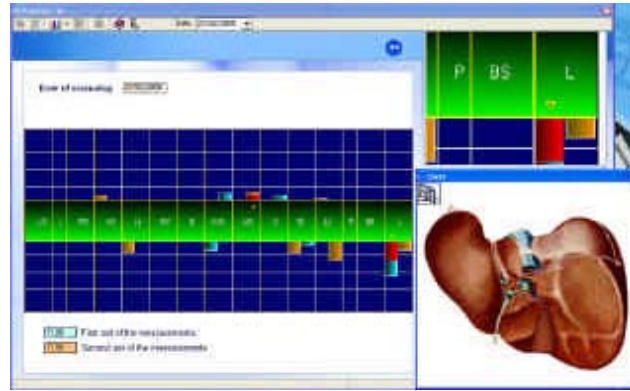

- ◆ Cardiovascular System ◆ Respiratory System
- ◆ Gastrointestinal System ◆ Immune System
- ◆ Endocrine systems ◆ Urogenital System
- ◆ Central and Peripheral Nervous System

The device has been designed for use in:

- ◆ Primary care facilities ◆ Emergency wards
- ◆ Hospital departments of internal medicine, cardiology, oncology, gastroenterology
- ◆ General practitioner private practices
- ◆ Outpatient wards and day-care clinics

How does the Medex Test work?

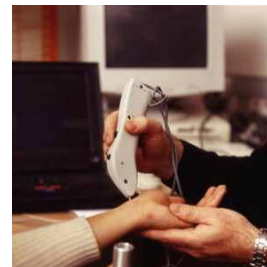

The methodological principle is based on the body's DVZs (dermatome-visceral zones), which are an expression of the interaction between changes in electrical resistance and conductivity of the skin, and changes in the functioning of internal organs.

Data is fed into the Medex Test™ system, which processes and analyzes the changes, and translates the analyzed data onto a visual display screen. With medical analysis of the data, the doctor's diagnostic precision reaches 90%. Information is provided regarding the nature of the problem, its severity, and whether it is acute or chronic. The screening results are unaffected by physical parameters, such as obesity and dense tissue.

Its early disease detection capability helps minimize unnecessary tests, and/or pinpoints areas of concern which may require further investigation.

Medex Test™ produces an on-the-spot diagnosis, and generates printable results for patients to present to referring doctors, hospitals and clinics.

Benefits of the Medex Test

Medical practitioners and health-care institutions have long awaited a generalized screening technology that could revolutionize the medical field. With its high predictive sensitivity for detecting internal organ disorders, as well as its ability to reduce a patient's costs, discomfort, and procedure time, the Medex Test™ provides the solution.

Medex Test™ main advantages over other diagnostic methods are:

- Highly accurate
- Non-invasive and painless
- Radiation-free
- Short testing time (20 minutes)
- Provides instant diagnosis
- Efficient monitoring of any treatment
- Distinguishes between pathological and functional impairments
- Determines the level of disease severity
- No patient preparation necessary
- Suitable for children over 6 years of age
- User-friendly, portable computerised system
- Minimizes Professional Indemnity risk
- Extremely cost-effective

Best of all, the revolutionary Medex Test™ yields results comparable to existing diagnostic devices at a fraction of the cost. With its "on-the-spot" early diagnostic ability, Medex Test™ can alleviate the pressure on hospitals to speed up diagnostic procedures, without compromising diagnostic accuracy.
