

GENERAL OVERVIEW AND CAPABILITIES

Medex Test™ is an innovative and powerful early diagnostic screening system for medical practitioners providing highly accurate and advanced computerized screening for internal organ pathologies. It can help to detect numerous organ-related diseases, including cancers. **It has obtained TGA & GMDN Registrations.**

Medex Test™ combines the principles of pathophysiology and neuroreflexology to help in the early diagnosis of diseases involving the:

- Cardiovascular System
- Immune System
- Respiratory System
- Endocrine System
- Gastrointestinal System
- Urogenital System
- Central and Peripheral Nervous Systems

The system has been designed for use in:

- Primary care facilities
- Emergency rooms
- Hospital departments of internal medicine, cardiology, oncology, gastroenterology
- General practitioner private practices
- Outpatient wards and day-care clinics

The system is capable of distinguishing between acute and chronic as well as pathological and functional conditions. The screening results are unaffected by physical parameters, such as obesity and dense tissue. Results can be used to monitor treatment effectiveness over time.

KEY ADVANTAGES OF MEDEX TEST

Best of all, the revolutionary Medex Test™ is:

- Accurate
- Non-invasive
- Radiation-free
- Able to distinguish between functional and pathological disorders
- Monitors treatment effectiveness
- Capable of providing instant diagnosis
- Portable
- Extremely cost-effective
- Painless and simple to use
- Assists Professional Indemnity/Risk Mitigation

- ❑ Yielding results comparable to existing diagnostic devices at a fraction of the cost. With its "on the spot" pre-diagnosis, Medex Test™ can alleviate the pressure on hospital beds to speed up diagnostic procedures, without compromising diagnostic accuracy.
- ❑ Furthermore, the device's portability makes it useful for travelling health practitioners, ambulances and potentially by military personnel where test results can be emailed by the Medex Test™ operator to a trained physician for quick diagnosis and rapid response times.

HOW THE MEDEX TEST WORKS

The methodological principle is based on the body's DVZs (dermatome-visceral zones), which are an expression of the interaction between changes in electrical resistance and conductivity of the skin, and changes in the functioning of internal organs.

Data is fed into the Medex Test system, which processes and analyzes the changes, and translates the analysed data onto a visual display screen. With medical analysis of the data, the doctor's diagnostic precision reaches 90%. Information is provided regarding the nature of the problem, its severity, and whether it is acute or chronic

The **Medex Test™** is groundbreaking technology for "in-house," "on-the-spot" diagnoses and will provide an important adjunct to physicians and health professionals in an ever-increasing, medically demanding world.
